

What is claimed is:

1. An interlabial pad with a size capable of being inserted between female labia without forcing, comprising:

a main sheet body composed of a water permeable surface sheet facing  
5 a body side and a water permeable or non-permeable back side sheet facing an opposite side of the body side, the main sheet body containing an absorbent body for absorbing body liquid, the absorbent body being enclosed by and between the surface sheet and the back side sheet, the surface sheet and the back side sheet being bonded each other; and

10 a sub-sheet body composed of a water permeable surface sheet positioned at the body side and a water permeable or non-permeable back side sheet facing a clothes side, the sub-sheet body containing an absorbent body for absorbing liquid, the absorbent body being enclosed by and between the surface sheet and the back side sheet, the surface sheet and the back side  
15 sheet being bonded each other;

wherein said main sheet body comprises a long convex area formed along the longitudinal direction of the surface side sheet so that a substantial center area of the surface sheet in a lateral direction is formed convex towards the body side.

20 2. An interlabial pad according to claim 1,

wherein the main sheet body and the sub-sheet body are bonded at each adjacent peripheral edge and are not bonded from an inner edge to inside.

3. An interlabial pad according to claim 1 or 2;

25 wherein the main sheet body and the sub-sheet body are bonded at each longitudinal side edge; and

wherein at least either sleeve portion in the lateral direction is non-bonded; and

wherein the no-bonded sleeve portion comprises a sleeve opening that forms a finger insertion opening in which a finger is inserted.

4. An interlabial pad according to claim 3;

wherein the main sheet body comprises a plurality of main sheet bodies,  
5 each of which are bonded together at each longitudinal side edge and at least either sleeve portion in the lateral direction is non-bonded so as to form a finger insertion opening, in which a finger can be inserted.

5. An interlabial pad according to claim 1 or 2; comprising a mini sheet piece fixed on the back side sheet of the sub-sheet in the clothes side, the mini  
10 sheet piece forming a finger insertion opening between the back side sheet and the mini sheet piece.

6. An interlabial pad according to claim 1 or 2; wherein the long convex area is composed of a bent portion formed by bending the main sheet body.

7. An interlabial pad according to claim 1 or 2;

15 wherein the long convex area is formed with a shorter top length than a bottom length in the longitudinal direction; and

wherein the sleeve opening is formed with both side edges sloped from a bottom to a top.

8. An interlabial pad according to claim 1 or 2,

20 wherein the long convex area has a substantially triangular longitudinal cross section.

9. An interlabial pad according to claim 1 or 2, wherein a longitudinal cross sectional area of the long convex area in the lateral direction is at least 1 cm<sup>2</sup>.

25 10. An interlabial pad as claimed in claim 1 or 2;

wherein a longitudinal cross sectional area of the long convex area becomes substantially-continuously decreased as the area is taken from one

end to the other end along the longitudinal direction.

11. An interlabial pad according to claim 1 or 2;

wherein the interlabial pad is a sanitary-napkin-coexisting-interlabial pad that is used together with a sanitary napkin.

5 12. An interlabial pad according to claim 1 or 2;

wherein the interlabial pad comprises an incontinent-interlabial pad for incontinence.

13. An interlabial pad according to claim 1 or 2;

10 wherein the interlabial pad comprises a vaginal-discharge interlabial pad for absorbing vaginal discharge.

14. An wrapping body comprising a wrapping container containing the interlabial pad of claim 1 or 2;

wherein the interlabial pad is contained in the wrapping container for individual wrapping.

15 15. A wrapping body comprising a wrapping container the interlabial pad of claim 3;

wherein the interlabial pad is contained for individual wrapping in an orthogonal direction to the wrapping container.

20 16. A wrapping body comprising a wrapping container containing the interlabial pad of claim 3,

wherein the interlabial pad is contained for individual wrapping in the wrapping container; and

wherein an tear-opening portion of the container is indicated by a picture or a character
